DETAILED ACTION***Drawings***

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference characters "100" and "128" have both been used to designate an access hole and a analytical system. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

1. Claims 1-16 are allowed.

Re to claim 1, the independent claim includes " a meter configured for measuring an electrical characteristic of at least one position electrode, and the electrical characteristic being dependent on a position of the liquid sample in the micro-channel in operative communication with the position electrode for which an electrical characteristic is measured " in combination with the remaining claim limitation is not taught and/or made obvious by the prior art. Lewis et al. teaches analyte detectors/sensor (125, 300) with in a channel. Lewis et al. does not teach a meter configured for measuring an electrical characteristic of at least one position electrode, and the electrical characteristic being dependent on a position of the liquid sample in the micro-

channel in operative communication with the position electrode for which an electrical

characteristic is measured. Moles teaches a plurality of electrodes (50, 52, 54) in a sensor

channel (28) (see figs. 1C and 3). Moles also teaches that any sensing means may be utilized and

substituted for electrodes (50,52,54) as long as the sensors are capable of measuring the analyte

as it flows past the sensing element in the sensing channel (28) (Col. 5, lines 44-49). Moles does

not teach a meter configured for measuring an electrical characteristic of at least one position

electrode, and **the electrical characteristic being dependent on a position of the liquid**

sample in the micro-channel in operative communication with the position electrode for

which an electrical characteristic is measured.
